Білоконенко Л. Курс комунікології в системі професійної підготовки філологів

У статті розглянуто основні етапи роботи викладачів кафедри української мови Криворізького державного педагогічного університету з формування у здобувачів вищої освіти комунікативної компетентності, що дає змогу сучасному педагогу вийти на високий рівень здійснення професійних функцій на основі світових стандартів. Проаналізовано відповідності Державних стандартів спеціальності “Філологія” і змісту програм дисциплін кафедри, виокремлено три етапи комунікативної освіти. Акцентовано на перспективах комунікативної освіти в Україні як обов’язковому гуманітарному компоненті професійного навчання.

Ключові слова: комунікологія, професійна діяльність, гуманітарна освіта, спілкування, комунікативні компетенції.
Ukraine, which today has not yet become a mandatory humanitarian component of vocational training.

*Key words:* communicology, professional activity, humanitarian education, communication, communicative competencies.

**Problem statement and its connection with important scientific tasks.** Today, the natural and technical sciences are of great importance, because, thanks to them, critical scientific problems are solved. Moreover, this fact is difficult to dispute because humanitarian knowledge does not play a significant role in the development of science and technology. However, the role of humanitarian knowledge is essential. With the development of information technology, a *new communication link* arises in the relationship between a person and a technical device. It is much like a person-to-person interaction, but doesn’t this new link replace the usual contacts between people? *Vice-communication* is a product of the digital world, which has a great influence on the formation of the mental and sensual world of human. This is a valuable product, but we think that it should not be unconditional. *True verbal partnership* – the meaning, pattern and necessity for the development of society. Society is a persistent, communicative population of people, and a violation of communication entails its change or destruction, affects the consciousness and activity of each of us. Therefore, the question about human contacts has always been relevant, because if an individual is deprived of normalized personal connections, he encounters significant difficulties in his life. The world is reforming towards utilitarianism, a reduction in humanitarian knowledge, and we should say that such a process is the reason for the loss of a culture of communication.

Communication has constant properties, elements, connections, relationships, therefore, it is perceived as a unity with its theoretical basis, providing the mechanisms of its functioning, the results of the reception and transmission of information, the impact on the subject. We talk about this concept in a *broad sense* when it involves knowledge of the various mechanisms of its implementation, and we do not discard the *narrow meaning* when it coordinates the universal connections and patterns of contacts between people. Since this process is complex, there is a strong need
for highly qualified specialists who can teach the rules of communication in achieving the goals. For example, you need to get to know the important people, maintain a conversation, correctly present yourself at an interview, find contact with an employer, discuss issues with a colleague or business partner, have a conversation with a child, neutralize a speech conflict, etc. Daily use of communication rules creates effective communication and allows you to achieve your life goals.

However, a person must understand that there are different strategies and tactics of communication. *Communication strategies* depend on the goal, objectives, audience, information transfer channels. It is crucial to realize what results of the communication process are expected, how it is tentatively assessed, is there a “plan B” if this process goes along an unplanned path. These are all components of a communication strategy. *Communicative tactics* are communicative steps that are focused on achieving a strategy. The problem is not how we exchange information, but how to make people hear and understand each other. This is *the meaning of the bilateral principle of communication*, which considers the stages of its construction: (1) the beginning of the contact, (2) the speech presentation of oneself, (3) the completion of the contact.

Communicology, like any other scientific branch, should be based on standards, in our case, on the *standards of the communication process*. Every graduate student should know these standards, be able to work with them, including the adaptation to a specific situation. This is especially true for graduates specializing in humanitarian knowledge. Usually, this knowledge is acquired in the school course “Modern Ukrainian language”, but is postponed until the high school, when all the primary language and speech skills have already been acquired.

At foreign universities (Skandinavisk institute for communicology (Norway); University of Niš (Serbia), Faculty of philosophy; University of Novi Sad (Serbia), Faculty of technical sciences; The University of applied sciences Velika Gorica (Croatia); National institute of technology (Japan), Fukushima college; Bosnia and Herzegovina university of Sarajevo; Universidad de los Hemisferios (Ecuador); The Scandinavian institute of
Communicology (Denmark), etc) are taught courses on communicology. Magazines are published (“Communication theory”, “Journal of communication”, “Language and communication”, “Communication reports”, “Communication education”, “Speech communication”, “Western Journal of communication”, “Psychology of language and communication”); dictionaries are published [Weik 1996; International encyclopaedia 2017] etc. The United States operates the National Communications Association; Department of communicology, the University of Hawaii at Manoa (Hawaii); Department of Communication, University at Buffalo, (New York); College of Social & behavioural senesces. Communication, The University of Arizona; Department of communication, University of Pittsburgh (USA). The European Communication Congress holds international conferences.

**Analysis of recent research and publications.** Communicology is a synthetic science that originated at the intersection of philosophy, sociology, psychology, political science, and other sciences, therefore, has a long interdisciplinary tradition. There are several definitions of communicology. Let us take this: *communicology* studies: types of communication; functions of communication systems and models of communication; basics of intercultural communication; methods of researches in different spheres of life [Denysiuk / Денисюк 2015: 7–14]. Another definition says that *communicology* is a scientific system that synthesizes into one union a knowledge about communication theory, theories of different communications; directions studying different communications (sociology of communication, the psychology of communication, etc.); the practice of communication in various spheres of society [Sharkov / Шарков 2010: 8–10]. Communicology is called “human science” [Smith, Catt, Klyukanov 2018: 7] and insists that communicology should be considered a human science and should be clearly distinguished from the social sciences, which are founded on information theory [Catt 2019: 22–25]. On a Department of communicology, the public web site the University of Hawaii at Manoa the actual fields of communicology are named: “Functions of communication (things we do with communication such as creating understanding, persuading and
influencing people; Contexts in which communication activity is highly prevalent (situations that are characterized by significant amounts of communication, such as interpersonal situations, small groups, organizations, intercultural settings, public settings); Messages, message outcomes, and message effects; Message delivery and communicative performance (studying how people present or perform messages such as in public speaking); Augmented communication (examining the technology that extends or enhances our communicative abilities such as the internet, cinema, television, radio, and telephone)” [University 2020].

Using this background, we will try to outline the prospects of communicative education in Ukraine. Once again, we should say that communicative education, as an important component of vocational training in Europe and America, has not yet become so in Ukrainian universities. Officially, we have only one branch of knowledge (“Social and behavioural sciences”, speciality “International relations, public communications and regional studios”), focusing only on communicative education. It is understandable that teaching students the rules of communication are still aloof from social, economic and, especially important – pedagogical, training of a competitive specialist. Although we must add that in recent years the theory of communication and communicology have been successfully studied in our universities. In Ukraine, curricula provide communicative competence in interdisciplinary materials in the range of subjects and areas (pedagogy, journalism, psychology, sociology, conflictology, the psychology of management). For example, the monographs “Marketing communicology as a mechanism of public policy implementation” [Kislov, Romanenko, Chaplai / Кіслов, Романенко, Чаплай 2018], “State-public communication as an object of scientific research in Ukraine” [Chaplai / Чаплай 2018]; textbooks for students “Communicology” [Denysiuk / Денисюк 2015], “Communication in public administration” [Dreshpak / Дрешпак 2015], “Communication policy in the activity of a civil official” [Naumik / Naumik 2010], “Communications in management” [Osovska / Осовська 2008]. We think this is just the beginning. The importance of teaching communicology, its need for many, mainly humanitarian, specialities
will gradually come to the fore, forming the cultural level and social position of a 21st-century specialist.

The aim and approaches of the study. Unfortunately, all textbooks on the university’s curriculum contain only the main topics for discussion and study of the rules of communication but do not give hints on how to organise a practice with visible results of turning students into specialists who are ready to teach schoolchildren the process of communication. The university must decide how to develop such competence among graduates. In conditions of modernisation of the education system of Ukraine, focused on entering the world educational space, a modern teacher needs to be competent not only in his narrow scientific field but also to be competitive in the labour market. Communicative competence is the main condition that allows the teacher to reach a high level of professional functions, an important indicator of his socio-professional status. Our Ukrainian language department has developed its approach to the formation of the necessary communicative competence, as one of the important soft skills of a university graduate.

The purpose of the article is to consider the main stages of work of teachers of the Ukrainian language department of Kryvyi Rih State Pedagogical University on the formation of philological communicative competence, which allows reaching a high level of professional functions based on world standards. Tasks: 1) to analyse the compliance of the State standards of the speciality “Philology” and the content of the programs of disciplines of the department on their implementation; 2) to determine the stages of teaching communication within the various professional disciplines of the department; 3) describe their own experience in teaching the course of Communicology, which contributes to the formation of communicative competence of the teacher-philologist, allowing to reach a high level of professional functions.

Presentation of the main research material. In any case, in our educational institution, the teaching of disciplines is regulated by normative documents and standards. These standards cover all parts of the disciplines, so it is natural to build our curricula, plans and topics based on regulatory documents. First, we based our practice
on the Higher education standards of Ukraine [Standarty / Стандарти 2019], as they include all information about professional activities and competencies of students. In accordance with these standards, we at our department divide the process of communicative education into three stages. The first and second is the formation of students' communicative literacy within other humanitarian disciplines; the third is the study of communicology in a practical course for PhD applicants. We are designing the training process so that students can successfully complete each of its stages, complete program tasks, and prepare final works under state requirements. Understanding of the standards, the possibility to use theoretical and practical knowledge will allow students and graduate students to adapt depending on the conditions of their professional duties and the type of communication. The whole learning process is as follows. According to State standards, there is a set of requirements for the content and results of the educational activities of universities within each speciality. This is a program product that should ensure the quality of higher education. In these documents, we see that the characteristics of the speciality “Philology”, the list of competencies of graduates, the normative content of their training comprise (among others) and the requirement for the formation of communicative competence. In the professional activity of a teacher, the role of communicative competence is special. It will ensure the effectiveness of his training and educational activities.

In fact, according to the standard of higher education of Ukraine of the First level among the objects of study and professional activity of the bachelor is also called interpersonal, intercultural and mass communication in oral and written form. The purpose component defines the organisation of successful communication in different languages. The standard sets individual (professional) competencies, including (1) the ability to use the language freely, flexibly and effectively, verbally and in writing form, in different genres, styles and registers (formal, informal, neutral) for resolving of diverse communicative tasks in various spheres of life and (2) ability to organise business communication. Therefore, we see that the normative content of the bachelor's training implies free communication on professional matters with specialists and non-
specialists in state and foreign language, both verbally and in writing form, and the organisation of effective intercultural communication. Also, an important result of education is the use of language in different genres, styles and registers of communication (formal, informal, neutral), for solving communicative tasks in the social, educational, professional, scientific, and everyday spheres.

As we have already mentioned, the activities of teaching communication science take place within different professional disciplines. Their programs, teaching materials are available to our students in the university's learning management system Moodle. Here are some examples.

**Bachelor’s Degree.** The course “Modern Ukrainian literary language” [Koloiz / Колоїз 2017] is designed so that students not only know the structure of the language but also use it effectively in verbal and written form. We study specific topics that allow you to form your bachelor’s communication skills. For example, *Characteristics of Ukrainian language vocabulary by areas of communicative functioning. The communicative organisation of the sentence. Formal-grammatical, semantic-syntactical and communicative organisation of a complex sentence. The concept of text. Text and discourse. Text and context. Functions of the text. Text in the process of communication. Functional and communicative versions of texts. Construction of texts of different types. Text as an object of syntactic and communicational unity.* For foreigner students, the discipline “Ukrainian as a foreign language” is taught. According to the state standard curriculum [Prohrama / Програма 2015], a communicative principle of material presentation and a communicative approach is provided. Knowledge of types, kinds, forms, models of intercultural communication allows reaching an understanding and a positive result in intercultural contacts. International students learn to apply their knowledge in concrete situations of intercultural interaction, to be tolerant to speakers of other languages and representatives of other cultures. The curriculum of our department [Maliuha / Малюга 2018] aims to comprehensively formulate communicative, linguistic, discursive, socio-cultural competences in foreign students. The latter contributes to their ability to use individual communication tactics in situations...
of varying degrees of difficulty and in free conversation, to implement speech in spontaneous communication, to use verbal and non-verbal means according to the task. Example. Teachers offer various types of communication for discussion: Travel. Government of Ukraine. Student's home country (state and economic system). The education system in Ukraine. The education system in the student's country. Ukrainian traditions and customs. The traditions and customs of the student's country. We pay attention to the linguistic means of texts of different styles. Students discuss topics: Development of science. The world today. World economic system. Integration of Ukraine into the European educational environment. Ukraine, through the eyes of foreigners. Global problems of humanity. The youth of the world. A separate block of topics on scientific communication: Scientists of Ukraine. World-famous scientists. The moral responsibility of the scientist of the 21st century. The communicative goal of teaching foreigners is achieved through the formation of students' necessary skills in all types of speech activities, providing the opportunity to communicate in the Ukrainian language environment.

Another discipline (“Stylistics and rhetoric of Ukrainian” [Bilokonenko / Білоконенко 2017]) has the task of developing the ability to assess the stylistic capabilities of different language levels in creating the necessary communicative effect. Bachelors need to learn how to motivate themselves to choose speech methods, depending on the communicative purpose, field and conditions of communication. In the module “Functional styles of Ukrainian language and rhetoric”, we pay attention to the topics: Intellectual-communicative function of the language. Psycholinguistic features of mass communication. Non-verbal communication with the audience. The value of language communication for the teacher. Communicative qualities of speech. Psychological and pedagogical features of rhetorical communication. Secrets of public communication. That is a discipline I am teaching to students, so in my classes, I pay attention to intercultural communication and the peculiarities of interethnic linguistic contacts between people living in different regions of our country. Another critical question for me is communication with regard to professional, religious, age, gender
and other differences between people. Because communicative competence can have many components, these three courses focus on its various details. However, their primary purpose is to systematise the knowledge and skills acquired by students earlier (back in school) through a series of conceptual lectures, presentations and practical work.

Nevertheless, the most meaningful is the discipline “Communication theory” [Vavryniuk / Вавринюк 2018]. Unfortunately, it belongs to the variant part of the syllabus and is only studied for one semester. The curriculum implies that, after completing theoretical and practical training, the bachelor (1) must be able to interact constructively with other people which is necessary for successful professional activity, (2) to understand the non-verbal language of communication, (3) to know the norms and rules of communication, observe etiquette in communication, to be tolerant, (4) to interact with people based on their age, status, sociocultural characteristics, (5) to take into account the features of intercultural communication, in particular, the national and cultural specificity of the maximum of communication, (6) to perform an adequate behave in a given situation, (7) correctly to evaluate the interlocutor as a person, as a potential competitor or partner and to choose the right communication strategy, (8) to be able to neutralise conflict communication, (9) to cause the interlocutor a positive perception of his or her persons. Training consists of different pedagogical activities, such as lectures, demonstrations, project preparation, practical tasks, business games.

**Master's Degree.** According to the Standard of higher education of Ukraine of the Second level interpersonal, intercultural and mass communication in verbal and written forms named among the objects of study and professional activity of the master. The standard specifies that they must be professionally able to organise successful communication in their native and foreign languages. The system of competences defines that students can communicate with representatives of other professional groups of different levels (with experts in other fields of knowledge/types of economic activity), effectively participate in various forms of scientific communication in the field of philology (conferences, round tables, discussions,
scientific publications). The normative content of the training implies the ability to speak fluently in the state and foreign languages for the implementation of written and verbal communication (in situations of professional and scientific communication), the use of knowledge of expressive, emotional, logical means of language to achieve the intended pragmatic result and the organisation of successful communication.

Masters can summarise their knowledge of communication across three disciplines. The first is “Fundamentals of mass communication” [Vavryniuk / Вавринюк 2017]. Its purpose is to study the basic categorical concepts of mass communication, sociological and psychological aspects of mass communication, public policy in mass communication, the development of mass communication systems in the international context and structure of human civilisation. Masters learn to create outreach texts, to navigate in the information space of the state, to use methods of information protection; to understand the economic, political, scientific, spiritual importance of communication for human and state life. In fact, they are trained to be experts in the effective implementation of social communication rules.

The second discipline is “Scientific style of the Ukrainian” [Koloiz / Колоїз 2017]. It has a slightly different object of study, but its content is important for teaching communication science. For example, Communicative features of a scientific text. Fundamentals of scientific communication culture. Culture of written and verbal scientific language. These topics help masters to broaden their understanding of scientific texts as communicative units of a kind, to form language culture and linguistic and professional competence as indispensable signs of the young researcher's education and professionalism.

**PhD Degree.** At our university, this program is based on international and national levels: FQ-EHEA (The framework of qualifications for the European higher education area) – level 3, QF-LLL (The European qualifications framework for lifelong learning) – level 8, NQF (National qualifications framework) – level 3. This framework of preparation allows postgraduate students not only employment in educational institutions or scientific organisations,
but also scientific positions in the field of communication and management. The program [Osvitno-naukova / Освітньо-наукова 2016], among other things, defines general scientific competencies: the ability to use different ways of linguistic behaviour in different areas of communication, in situations of conflict prevention and resolution; the ability to apply a set of sociolinguistic, national and intercultural knowledge to achieve a communicative purpose; the ability to use communicative strategies when solving professional tasks. Among the instrumental competencies, we see the use of theoretical and empirical knowledge in the field of intercultural communication.

A set of disciplines are taught at the Department of Ukrainian language to fulfil the requirements of the program and further communicative preparation of postgraduate students. For example. The course “Language and intercultural communication” [Mishenina / Мішеніна 2017] helps postgraduate students to predict the results of communication in different situations; break down information into components, to understand connections between those components; to notice mistakes and errors in the logic of presentation of the material, the difference between facts and results; properly integrate information in a speech to obtain a single communicative space with a new system value. Teachers draw attention to the problems in communication between people belonging to different national and linguistic and cultural communities. They teach to speak and hear the interlocutor correctly, to understand the specific meanings that are expressed and interpreted by the participants in intercultural communication. Upon completion of this course, postgraduate students should be able to: (1) distinguish aspects of intercultural communication; (2) understand the essence of verbal communication and to notice the national features of verbal expression; (3) identify the meaning and sense of words in intercultural communication, a semantical difference of words in different languages. Another example. It is the discipline “Spiritual synergetic of the mother tongue” [Maliuha / Малюга 2017], which summarises the processes involved in communicating with people within the same ethnic group, as well as in inter-ethnic and inter-state relations. We draw attention to the fact
that language is not only a way of communication but also a socio-cultural phenomenon that promotes the cognition and transformation of a person's social reality. Postgraduate students are trained in the philosophical analysis of the functioning of linguistic means in a particular social environment. In practical training, we also rely on the experience of our colleagues in the departments of English and German. In their studies, they teach postgraduate students to use communication strategies adequately when solving professional tasks; to differentiate conceptual and linguistic pictures of the native speakers' language and other languages; to use different means of speech behaviour in different spheres of foreign language communication. Therefore, the organisation of educational material, distinct ordering and distribution of pedagogical frameworks of activity is for the teachers of our department the basic requirements of a high level of formation of communicative competences. The syllabus is also designed to create a continuous process of self-development, training, cooperation.

Course in Ukrainian communicology: main results.

“Course in Ukrainian communicology” [Bilokonenko / Білоконенко 2019] is compiled in accordance with the PhD Degree program. The subject of the study is the communication rule that ensures the success of postgraduate students' professional activity, the ability to cooperatively communicate and interact with people, effectively exchange information, model communication in different situations. The course helps postgraduate students find out precisely what communication abilities are needed and what kind of skills each of them needs for successful scientific and professional activity. So, I offer the information that is a high priority to him or her. After training, applicants must understand the basic principles of communication science represented by different linguistic trends; have an understanding of communication mechanisms in different spheres of life; correctly accept the rules of harmonious and conflict communication taking into account social, psychological, ethnic and other factors; be aware of society's request for effective communication that affects the culture, outlook, and moral principles of people. They should also be able to use this knowledge in scientific and teaching activity; diagnose the linguistic and
extralinguistic system of harmonious or conflict communication; think critically about barriers of communication; effectively use methods of conflict resolution; implement the standards of conflict-free communication.

The whole learning process looks something like this. The discipline consists of two big blocks – the theory of communicology and the rules and mechanisms of cooperative and conflict communication. In fact, we have these parts that go hand in hand with real-world tasks we can work on. The primary purpose of both is to systematise and summarise the knowledge gained by the postgraduate students before, through a series of conceptual lectures made by the students themselves in the form of a presentation, as well as through practical work. For example, we organise paired or group business games that reproduce professional communication conditions that are similar to real ones. Postgraduate students play different roles in these games. They can be team leaders, experts, analysts, technical executors and more. They work on projects; organising material is a specific way. Case-study is used when postgraduate students analyse specific communication situations, model their development, and find ways to solve problems optimally. In any case, we must pay attention to the self-examination of the work. Postgraduate students should see their own mistakes, analyse them and correct them. These and other teaching methods create a work atmosphere that stimulates mental, communicative and creative activity.

The topics of conceptual lectures. The topic of conceptual lectures is quite broad. In fact, all the key theoretical fields and units of communication science are well represented in the scientific works we have named above. Therefore, we have only included these topics in our syllabus. However, these topics became the basis of only the first block of “Theory of Communicology”. Additionally, we use a lot of other information and literature. We refer to our monograph [Bilokonenko / Білоконенко 2019], for which a special section “Conceptual apparatus of the communication process” is written. It will take several pages to introduce all the course in Ukrainian communicology topics, so, in the list of topics below, we will only include those that have direct relevance to this article.
Block 1. The theory of communicology.

**Topic 2. Scientific approaches to the study of communicology. Cultural and psychological factors of communicative interaction.** Main issues: Traditional, applied, philological, psychological and sociological directions for the study of communication theory. Traditional scientific approaches: hermeneutics, homiletics, rhetoric, philosophy, logic. Applied results of communication processes in semiotics, mass communication theory and psychoanalysis. The problem of interpersonal communication.

**Topic 3. Communication channels and barriers.** Main issues: Types of communication channels. Selection and effective use of various communication channels for the implementation of their own communication action. Natural, technical, artistic communication channels. Language barriers of communication. Psychological barriers of communication.

**Topic 5. Political, intercultural and international communication.** Main issues: Subjects and objects of political communication. The role and place of mass media in political communication. The specificity of Internet usage in the political sphere. Culture as a form of communication. Areas of intercultural communication. Problems of intercultural communication. Elitist and mass culture. The place of international communication in the global information space.
Block 2. Mechanisms of cooperative and conflict communication

And finally – about practical work. We have already mentioned that postgraduates prepare several tasks within specific time frames. For example, teams are formed to execute practical projects. Postgraduate students prepare their documents with their own vision of these projects in the standard form. At the lecture, we explain the basic steps they need to take. Then they move on to creating projects. This happens in several phases. The first phase is the first month of study. It
is not long at all because they do not yet have full information about
the subject. Postgraduate students can prepare questionnaires, conduct
questionnaires to develop project frames, make a list of literature by
topic, process literature, write a plan or abstract. The postgraduate
students and the teacher review pre-prepared documents. Then
corrections are followed until the materials are approved. The second
phase overlaps with the first phase and begins at the time of project
proposal approval. At this time, postgraduate students have already
defined the structure, scope of the project, which facilitates their
further work. The third phase is the completion of work on documents;
here again, the process of expert review takes place. The fourth phase
consists of the presentation of the project and testing to confirm its
effectiveness and efficiency. Each postgraduate student is responsible
for his or her own line of work as well as for timely submission of the
materials to the group. All this time, we have been trying to coordinate
the work of the group so that we can support them. At the end of this
phase, we work together to analyse and summarise the results. Of
course, the limited time of such work does not allow the graduate
students to pass all the theoretical and practical links in the study of the
discipline. Nevertheless, even what they have time to do on specific
topics deepens their knowledge and teaches them to develop in the
future.

Conclusions and perspectives of further scientific research.
As a result, postgraduate students learn to predict the results of
communication in different situations, to notice mistakes in
communication, to submit information to avoid conflicts correctly.
They acquire the skills to make informed decisions and to carry out
their professional activities in accordance with national
communication standards. All kinds of individual, team or teamwork
are subordinated to this goal. We think that our experience in
teaching Communicology, like the whole system of our department,
forms a meta-competence for students and postgraduate students.
After all, they learn to analyse, plan, control, evaluate their own
cognitive processes, experience, knowledge, to overcome problems,
to find ways to use their knowledge effectively. Course in Ukrainian
Communicology is based on a long-standing theoretical scientific
base. But for us, the practical formation of a conscious experience of communication is more important.

We believe that communication that is predicated on the framework of our cultural code needs to be critically analysed in today's context and cannot be regarded as merely a reflection of human behaviour. That is why we form learning conditions that allow postgraduate students to identify and evaluate the positive and negative in communication, which becomes a powerful additional life and professional resource for them.

Prospects for further research can be used to analyse the features of the formation of communicative skills of students specializing in various professional fields.
